For Advisor use only. Returns listed match data also delivered on WWA internal monthly fact sheets and are net of WWA maximum annual fee of 1.95%.

Risk categories have been determined on a best efforts basis based on the model information and performance provided to WWA by each Third Party Investment Manager.

WWA encourages client investment model suitability be determined dynamically based on Advisor knowledge of models combined with client goals and objectives. WWA discourages investment model suitability based on static matching of risk assessment results to scorecard risk categories alone. Client investment model recommendations outside of matching risk assesssment results to scorecard risk categories is acceptable depending on the long term goals and objectives of the client that are defendible in the event of an audit.

******WWA Bluerock Total Income+ Real Estate* is a model containing an interval fund with limited liquidity. For this reason, when used as a single investment that is not diversified, this model can be considered Aggressive instead of Moderate Conservative.***

This form is provided by WWA as a courtesy to display fact sheet data collectively on one form. Scorecards are not intended to encourage client investment model suitability based on monthly or YTD return figures alone. Internal trading methodology, long term objectives, and long term performance of each model should be at the forefront of considering whether a model is suitable for a client based on their specific needs and calculated risk tolerance.

"N/A" indicates the following: not enough data availabile to present returns and/or full performance data not provided by the Manager and/or an error printing the sheet.
